

Are You Ready for the Future of Value-Based Care?

As healthcare payment systems move to value-based care, real proof of quality is more critical than ever before. Envoy is the only customizable specialty pharmacy therapy management solution that collects, aggregates and delivers real-world evidence on the impact of clinical outcomes to the cost of care, adherence and product utilization.

The Envoy Solution

- Supports your pharmacy by engaging patients and physicians in high quality care
- Strengthens your payer relationships through enhanced clinical outcomes
- Reveals insights into the needs of patients who utilize your therapies

Clinical Therapy Workflow Software

Customizable by diagnosis, therapy or product, this revolutionary workflow software supports the clinical management of high touch disease states by guiding the clinician through disease and drug-specific assessments and care plans, and captures patient information at the site of care.

Data Reporting, Analytics and Intelligence

Pharmacy, physicians and pharma portals provide role-based, real-time views by patient and patient population, standardized treatment outcomes and financial and operational insights.

Strategic Technology Support

With both healthcare software and systems architecture design expertise, the developers of Envoy deliver fast, customizable implementation based on the goals of the specialty pharmacy and continuous high touch customer support.

Experience the only fully-customizable Specialty Pharmacy Therapy Management solution

Drive top-line growth for your specialty pharmacy and strategic commercialization for your specialty product

Fully Customizable

Envoy is designed to be fully customizable, based on the workflow of your specific organization. This customization is inherent to the solution, not an additional feature or function. Customized assessments can be designed for up to five therapies per patient, based on the specific comorbidities by disease state, therapy and product.

Standardized Data Collection

Unlike other clinical therapy management software, the Envoy solution is designed around the workflow of the clinician, so clinical data is collected at the point of care. Data is standardized and metrics like quality of life scores are tracked based on changes over time by therapy, product utilization and cost of care.

Bi-directional Communication

With bi-directional communication between the pharmacy, patient and physician, Envoy improves patient adherence and physician engagement, while collecting more in-depth data on quality of life measures, patient outcomes and product usage.

Easy Integration with Pharmacy Management Platforms

With both healthcare software design and information systems architecture expertise, the developers of Envoy have extensive knowledge and experience in pharmacy management platforms, allowing for speed of integration and efficient use of time and resources.

High-Touch Customer Support

Once installed, your team will receive two days of on-site training as well as on-going access to a high-touch, 24/7 customer support team.

Flexible Pricing Model

Pricing is flexible and scalable, based on the needs and growth of your pharmacy and patient population.
